

Verefa - Company Fact Sheet

Overview

Verefa is a biometric identity provider enabling frictionless authentication across digital and physical environments. Using advanced facial recognition, location intelligence, and adaptive risk scoring, Verefa delivers secure, seamless, and user-centric verification.

Core Offering

- Biometric authentication using facial recognition
- Location-based trust and fraud detection
- Risk scoring based on device signals, behaviour, and context
- Secure event access and ticket verification
- Customer and employee management platform (B2B/BC2)
- Identity verification (KYC) with E-passport NFC validation
- SDK and API for developers on web and mobile

Key Features

- High performance face recognition
- Robust deepfake and spoof detection
- QR code flow for cross-device login
- Web support on Android browsers
- Native mobile app support for iOS and Android
- Multi-device consistency checks (desktop + mobile)

Security

- Multi-modal biometric checks
- Device fingerprinting and environment analysis
- Automatic detection of impossible travel or suspicious movement
- Network-level DDoS and bot mitigation
- Encryption in transit and at rest

Use Cases

- Online account login
- Event access control
- IoT device authentication
- Payment verification (future roadmap)
- Age verification and secure ticketing
- High-security enterprise grade identity services

Developer Integration

- Lightweight web SDK
- Mobile SDK (iOS and Android)
- Simple REST API for identity checks
- Automatic fallback flows for unsupported devices
- Free access tier with optional premium features

Company Vision

To make identity effortless, universal, and secure by unifying real-world and digital authentication through biometrics and intelligence.
